17. ABSTRACT (MAX. 250 WORDS) Part one of the report consisted of an analysis of trends between 1960 and 1961 in wages of United States farm workers in major areas using Mexican nationals. The data were derived from prevailing-wage reports received by the Bureau of Employment Security from affiliated State employment security agencies. The survey rates were used by the Secretary of Labor in determining the rate to be paid to foreign workers doing similar work in the same area. In 1961, approximately 291,000 Mexican contract workers were used in 24 states, about 97 percent of whom worked in Arizona, Arkansas, California, Colorado, Michigan, New Mexico, and Texas. Wage rates rose almost three percent in the areas analyzed, with California leading in the rate rise. Total seasonal hired worker employment was down. In Texas, rates rose slightly. In Arizona, rates dropped slightly, mainly due to a drop of nearly four percent in the rates paid in the lettuce harvest. In Arkansas rates declined because a drop in cotton chopping rates more than offset a rise in cotton picking rates. In New Mexico, rates for preharvest activities rose. In Colorado and Michigan wage advances were largely the result of increases in sugar beet cultivation rates. Based on the rate findings, an adverse effect determination was issued by the Bureau of Employment Security. This provided that the employment of Mexican nationals at hourly rates in 22 states could not be authorized below certain rates, ranging from sixty cents to one dollar, depending upon the state. Part two of the report consisted of prevailing-wage determinations issued during 1961 for the seven major states employing Mexican nationals.

FARM WAGE RATES AND TRENDS 1960-1961

Foreword

Part I of this publication presents an analysis of trends between 1960 and 1961 in wages of United States farm workers in major areas using Mexican nationals. The data used in this study were derived from prevailing-wage reports received by the Bureau of Employment Security from affiliated State employment security agencies.

The Bureau of Employment Security requires State agencies to survey wage rates payable to United States farm workers in areas where Mexican nationals are employed. The data are used to arrive at the prevailing wages ("wage findings") paid to United States workers in activities in which Mexican nationals are used. Foreign workers are required to be paid no less than the prevailing rate paid to domestic workers. The survey rates are therefore used by the Secretary of Labor as a basis for determining the rate to be paid to foreign workers doing similar work in the same area. A summary of these determinations is published monthly as an appendix to Farm Labor Markets Developments.

Part II consists of prevailing-wage determinations issued during 1961 for the seven major States employing Mexican nationals.

PART I

**FARM WAGE RATES AND TRENDS
1960-1961**

Farm Wage Rates and Trends 1960-1961

The law which authorizes the employment of Mexican nationals to supplement the United States farm work force in seasonal agricultural activities requires the Secretary of Labor to assure that the foreign workers will not adversely affect the wages and working conditions of domestic laborers similarly employed. To carry out this responsibility, the Secretary of Labor determines the prevailing wage rate in each area and activity in which Mexican workers are employed, based on surveys of rates payable to U.S. workers. Employers of foreign workers are required to pay rates no lower than those prevailing for domestic laborers.

Wage Rates Rise Nearly 3 Percent in Major Areas

In 1961, approximately 291,000 Mexican contract workers were used in 24 States. About 97 percent of these workers were employed in seven States--Arizona, Arkansas, California, Colorado, Michigan, New Mexico, and Texas. A study of trends in wage rates paid to U.S. workers in 1961, in major areas and activities of foreign-worker employment in these seven States, indicates that rates were substantially unchanged from 1960 levels in approximately 64 percent of the cases analyzed. Significant increases in wage rates occurred in slightly less than one-third of the activities, while four percent declined. In a number of instances, wage-rate increases resulted from special wage determinations made by the Bureau of Employment Security to prevent adverse effect to U.S. workers. For all areas analyzed, the average wage rate paid in 1961 was approximately 2.9 percent higher than in 1960. For the United States as a whole, the average hourly farm-wage rate without room or board, as reported by the U.S. Department of Agriculture, rose 2.1 percent during the same period.

State	Hourly Farm-Wage Rate Without Room or Board (USDA)		Percent Change in Average Wage Rates in Major Areas of Mexican Employment (BES) 1960-1961
	Rate in 1961	Percent Change 1960-61	
All States	\$.99	+2.1	+2.9 ^{a/}
Arizona	.99	+2.1	-0.4
Arkansas	.73	0.0	-1.2
California	1.27	+3.3	+6.6
Colorado	1.13	+3.7	+3.9
Michigan	1.09	+1.9	+1.7
New Mexico	.87	+2.4	+5.4
Texas	.80	+2.6	+0.6

^{a/} Based on trends in major activities in 187 crop-wage areas in 7 States accounting for the bulk of Mexican worker employment in the United States in 1961.

Total Seasonal Hired Worker Employment Down 6 Percent

At the time of peak employment of foreign workers in 1961, total seasonal hired worker employment was 1,294,000, a decline of 6 percent from the previous year, according to in-season farm labor reports from State employment agencies. In each of the seven States where foreign labor use was greatest, peak employment of seasonal hired workers declined between 1960 and 1961. In four of these States, use of foreign workers was substantially less in 1961 than in 1960; in one State, Michigan, there was a substantial increase; and in the other two states, there was no significant change:

State	Employment Levels in 1961 and Percent Change, 1960-61, Selected States					
	Peak employment in 1961			Percent change, 1960 to 1961		
	Total	Domestic	Foreign	Total	Domestic	Foreign
Texas	280,500	176,400	104,100	- 9	-14	a/
California	220,100	153,200	66,900	- 6	- 4	-11
Arkansas	85,300	64,100	21,200	-14	- 5	-32
Michigan	68,200	53,800	14,400	-12	-19	+29
Arizona	26,500	15,600	10,900	-32	-37	-24
Colorado	19,000	12,400	6,600	- 9	-13	+ 1
New Mexico	12,000	4,000	8,000	-19	+11	-29

a/ Less than .5 percent increase.

California Leads in Rate Rise

The upward movement in the average rate was largely influenced by developments in California, where rates rose approximately 6.6 percent, on the average, from 1960 to 1961. This increase reflects, in part, the continued upward trend in hourly rates, the basis upon which most foreign workers in the State were paid. In 1960, hourly rates of less than \$1.00 were commonly paid in many areas. Widespread increases in 1961 raised the level to \$1.00 or higher in virtually all areas. The major exceptions were the Imperial Valley and East Riverside areas, where rates of \$.75 to \$.90 were reported in 1961, despite increases of 10 to 15 cents in some activities. Payroll surveys indicate that average hourly earnings at piece-rates rose approximately 8 percent from \$1.12 in 1960 to \$1.21 in 1961. In more than half of the activities analyzed in California, rates were significantly higher in 1961 than in 1960. They were substantially unchanged in the remaining activities analyzed.

Typical Wage Rates, Major Activities, California, 1961 a/

Activity	Area	Typical Wage Rate
Tomato Harvest		
Pick - Market	Merced County	\$1.00 an hour
	Ventura County	1.00 an hour
Pick - Cannery	San Benito-Santa Clara	.16-.18 per 50# box
Loading	All Areas	.02 per 50# box
Strawberry Harvest		
	Santa Clara-San Benito	1.00 an hour
	Salinas	1.00 an hour
	Watsonville	1.00 an hour
	San Joaquin-Stanislau	.60 per 12# fresh market crate

a/ Does not include rates paid on a schedule basis.

Standard schedules of piece-rates are used in many areas for harvesting tomatoes, asparagus and citrus fruits. These schedules usually provide for a range of rates, depending upon yield or other special factors. In many cases they are designed to provide earnings equivalent to the prevailing hourly rates for comparable work in the area.

In vegetable harvesting, wage rates rose approximately 6.6 percent, on the average, from 1960 to 1961. Non-schedule rates in tomato harvesting, the major activity in which foreign workers were

employed in the State, were about 1.4 percent higher in 1961 than in 1960. Combined earnings under both schedule and non-schedule rates rose from an average of \$1.24 to \$1.29 per hour, payroll surveys show. Hourly rates in the lettuce harvest rose approximately 14 percent from 1960 to 1961, largely as a result of an increase in the prevailing rate in the Imperial Valley from \$.75 per hour in 1960 to \$.90 in 1961. In December 1961, a rate of \$.24 per carton for all harvest activities, including loading, was determined to be the minimum contract rate for the Imperial Valley and East Riverside areas. ^{1/} Average hourly earnings at piece rates rose from \$1.18 to \$1.28 payroll surveys showed.

Wage rates in the strawberry harvest rose approximately 9 percent, reflecting an increase in the hourly rate in most areas from \$.90 in 1961 to \$1.00 in 1961. Non-schedule rates for harvesting citrus fruits were approximately 12 percent higher in 1961 than in 1960. Earnings, under both schedule and non-schedule piece-rates, rose from an average of \$1.03 to \$1.11, payroll surveys show.

Wage Rate Trends in California,
by Activity, 1960-1961

Activity	Percent Change in Weighted Average
All activities	+6.6
Vegetable harvesting	+6.6
Fruit harvesting	+9.1
Cotton harvesting	+3.8
Multicrop cultivation and harvesting	+5.8
Sugar beet cultivation	+5.8

Wage Rates Rise Slightly in Texas

Wage rates paid U.S. workers in Mexican-using areas of Texas were generally stable over the year, rising less than one percent from 1960 levels. In approximately four-fifths of the activities included in this study, the rates were substantially unchanged.

^{1/} This determination was subsequently amended in January 1962 to give the worker an option of an hourly rate of \$1.00 or the \$.24-per-carton piece rate with an hourly earnings guarantee of \$1.00.

A rate of \$.50 an hour was paid in most activities in which foreign workers were employed on an hourly basis in 1961 while earnings of workers employed in piece rates generally averaged about \$.60.

Typical Wage Rates, Major Activities, Texas, 1961

Activity	Area	Typical Wage Rate
Cotton Pulling	All Areas	\$1.50 per cwt.
	Edwards Plateau	1.55 per cwt.
	High Rolling Plains	1.50 per cwt.
Cotton Picking	All Areas	2.50 per cwt.
	Lower Rio Grande Valley	2.50 per cwt.
	Trans-Pecos	2.05 per cwt.
Cotton Cultivation	All Areas	.50 per hour
	Lower Rio Grande Valley	.40-.45 per hour
	Edwards Plateau	.50 per hour
	High Rolling Plains	.55-.60 per hour
Citrus Harvest	Lower Rio Grande Valley	.10 per 80# box
Tomato Harvest	Lower Rio Grande Valley	.25 per 50# box
Green Bean Harvest	Lower Rio Grande Valley	.015 per pound
Onion Harvest	Lower Rio Grande Valley	.10 per 50-55# sack

Source: ES-232 Domestic Agricultural In-Season Wage Reports.

Rates in the cotton harvest, the major activity in which Mexican nationals were employed in Texas in 1961, rose approximately 1.2 percent, on the average. These generally reflected a rise in many areas from a prevailing rate of \$1.50 per cwt. for cotton pulling in 1960 to \$1.55 in 1961, the minimum contract rate for Mexican nationals in this activity. Bureau of Employment Security adverse effect determinations establishing higher minimum contract rates for Mexican workers in a number of areas than those prevailing in the previous year were factors in this increase. Rates for cotton cultivation declined slightly, largely as a result of a drop in the prevailing rate for this activity in the Lower Rio Grande Valley from \$.45 per hour in

1960 to \$.40 in 1961. The minimum contract rate for Mexican nationals employed at hourly rates was \$.50 in both years. Overall, rates in vegetable harvesting increased about 5 percent for the State, due in part to adverse effect determinations by the Bureau which resulted in higher rates for a number of crops.

**Wage Rate Trends in Texas,
by Activity, 1960-1961**

Activity	Percent Change in Weighted Average
All activities	+0.6
Cotton harvest	+1.2
Cotton cultivation	-0.4
Vegetable harvest	+5.4

Lettuce Harvest Rates Decline in Arizona

While both hourly and piece rates are paid seasonal farm workers in most of the activities in which foreign workers were used, hourly rates were commonly paid. The most typical hourly rate in 1961 was \$.75. Piece-rate workers generally earned more, averaging about \$.87 per hour for all activities paid on this basis, according to payroll studies.

The average rate in Arizona in 1961 was slightly below the 1960 level, largely due to a drop of nearly 4 percent in the rates paid in the lettuce harvest. Throughout most of 1961, both hourly and piece rates were paid in this activity, with employers of Mexican nationals generally paying hourly rates. In November 1961, an adverse effect determination by the Bureau established a rate of \$.21 per carton as the minimum contract rate for Mexican nationals in lettuce harvest activities, except loading, in Maricopa and Yuma Counties. 2/

2/ This determination was subsequently amended in January 1962 to give the worker an option of an hourly rate of \$1.00 or a \$.24-per-carton piece rate for all activities, including loading, with an hourly earnings guarantee of \$1.00.

Typical Wage Rates, Major Activities, Arizona, 1961

Activity	Area	Typical Wage Rate
Pick Short Staple Cotton	Cochise	\$2.50 per cwt.
	All other	3.00 per cwt.
Lettuce Harvest	All Areas	.80 per hour ^{a/} .21 per carton
Multicrop Irrigation	Cochise	.70 per hour
	Maricopa	.75 per hour ^{b/}
	Yuma	.74 per hour
Lettuce Cultivation	All Areas	.75 per hour
Cotton Cultivation	Cochise	.70 per hour
Green Onion Harvest	Maricopa	.10 per dozen bunches
Dry Onion Harvest	Maricopa	.12 per field sack

Source: ES-232 Domestic Agricultural In-Season Wage Reports

- ^{a/} Effective November 24, 1961, only the piece rate was applicable.
- ^{b/} The rate rose to \$.80 in September under an adverse effect determination.

In multicrop irrigation, the average wage rate rose more than 5 percent for the State as a whole. This increase was largely due to an adverse effect determination by the Bureau which raised the prevailing rate for this activity in Maricopa County to \$.80 per hour, a rise of 5 cents over the level previously prevailing. There was little or no change in rate from 1960 levels in most other activities.

Cotton Picking Rates Up 3 Percent in Arkansas

Rates in Arkansas declined slightly more than one percent in 1961, as a drop of nearly 7 percent in cotton chopping rates more than offset a 3 percent rise in cotton picking rates. Rates for cotton chopping, which had ranged from \$.40 to \$.50 per hour in 1960,

declined ten cents in half of the areas and were unchanged in the other areas in 1961. The rise in cotton picking rates was primarily due to an adverse effect determination by the Bureau in 1961 which provided for an increase in the rate paid to Mexican nationals, from \$2.50 per cwt. to \$3.00, after completion of 55 percent of the harvest in the State. Earnings of Mexican nationals at \$2.50 per cwt. tend to average about \$.60 per hour, according to payroll surveys.

A small number of Mexican nationals were also employed picking strawberries in Mississippi County at a piece rate of \$.08 per quart. In 1960, the rate rose in-season from \$.07 to \$.08.

Rates for Preharvest Activities Rise in New Mexico

In New Mexico, rates rose an average of nearly 5.5 percent, with some increase occurring in all activities in which Mexican nationals are used. The average rates in the cotton harvest, the major seasonal activity in the State, rose 3 percent largely due to a rise in Chaves County from \$2.25 per cwt. in 1960 to \$2.50 in 1961.

In cotton cultivation, rates were generally \$.60 per hour in all areas, 5 to 10 cents higher than in 1960. As a result of a Statewide survey conducted by the Bureau, prevailing wage and adverse determinations were issued establishing minimum rates for contracting Mexican nationals of \$.70 per hour for irrigators and general farm hands, and \$.75 for tractor operators. These rates were 10-15 cents higher than the previous contract rates.

Typical Wage Rates, Major Activities, New Mexico, 1961

Activity	Area	Typical Wage Rate
Cotton Picking	All Areas	\$2.25 per cwt.
	Mesilla Valley	2.25 per cwt.
	Artesia	2.50 per cwt.
	Chaves County	2.50 per cwt. a/
	Eddy (South)	2.25 per cwt.
Cotton Cultivation	All Areas	.60 per hour
Irrigation	All Areas	.70 per hour
Tractor Operators	All Areas	.75 per hour
General Farm Hands	All Areas	.70 per hour

Source: ES-232 Domestic Agricultural In-Season Wage Reports.

a/ Rate determined under dominated area procedure.

Sugar Beet Rates Increase in Colorado and Michigan

The wage advances in Colorado and Michigan were largely the result of increases in sugar beet cultivation rates. In both States the rate set by the U.S. Department of Agriculture for blocking and thinning was \$1.00 per acre higher in 1961 than in 1960.

The major crop activities in which Mexicans are used in Colorado are sugar beet cultivation, and pickle, lettuce, and tomato harvesting. Hourly rates were generally \$.75 to \$.80 per hour in 1961, while piece-rate earnings ranged from about \$.80 to \$1.10. Rates for sugar beet cultivation rose nearly 5 percent between 1960 and 1961. Workers in the pickle harvest generally continued to receive a wage equivalent to 50 percent of the graded value of the crop. In lettuce harvesting, where both piece and hourly rates had been used in 1960, an adverse effect determination by the Bureau early in the 1961 season required the payment of a piece rate of \$.215 per carton to Mexican nationals in the San Luis Valley. Later in the season, the prevailing domestic rate was \$.22. The only activity in the State experiencing a decline in the average rate was tomato harvesting.

Typical Wage Rates, Major Activities, Colorado, 1961

Activity	Area	Typical Wage Rate
Sugar beet cultivation		
Blocking and thinning	All areas	\$15.50 per acre
Hoe trimming	All areas	11.50 per acre
Hoeing	All areas	9.50 per acre
Weeding	All areas	6.00 per acre
Pickle harvesting	All areas	50 percent of graded crop
Lettuce harvesting		
Cut-pack	All areas	.22 per carton
Cut-pack & other tasks	Alamosa	.80 per hour
	Monte Vista	.75 per hour
Tomato harvesting		
	Pueblo	.15 per 40# lug
	Denver	.75 per hour
	Fort Lupton	.12 per 37½# lug
	Grand Junction	.11 per lug a/

Source: ES-232 Domestic Agricultural In-Season Wage Reports.

a/ Rate determined under dominated area procedure.

Hourly rates paid to domestic workers in areas and activities in which foreign workers were employed in Michigan in 1961, ranged from \$.70 to \$1.25. The most common hourly rate, paid to nearly three-fourths of the U.S. workers, was \$1.00 per hour. Piece-rate workers tended to earn less, on the average, than hourly-rate workers--about 87 cents per hour, according to payroll surveys.

For all activities in which Mexican nationals were used in Michigan in 1961, rates paid U.S. workers rose approximately 1.7 percent on the average, largely due to a rise in the U.S. Department of Agriculture rate for blocking and thinning beets. The major activity in which Mexican nationals were employed in Michigan in 1961 was the pickle harvest. Workers in this activity continued to be paid under a formula tied to yields, earning about \$.87 per hour in both 1960 and 1961.

Typical Wage Rates, Major Activities, Michigan, 1961

Activity	Area	Typical Wage Rate
Pickle harvest	Statewide	A yields formula with earnings of \$.85 per hour as a target
Sugar beet cultivation		
Blocking and thinning	Bay City	\$14.00 per acre (28" rows)
Hoeing (Monogerm Seed)	All areas	9.00 per acre (28" rows)
Weeding	All areas	5.00 per acre (28" rows)
Peach harvest		
Strip picking	Muskegon	.20 per bushel
Spot picking	Muskegon	1.00 per hour
Multicrop harvest	Muskegon	1.00 per hour
Onion harvest		
Topping yellow onions	Lansing	.10 per crate

Source: ES-232 Domestic Agricultural In-Season Wage Reports.

ADVERSE EFFECT DETERMINATION--1962

Following public hearings conducted by the Bureau of Employment Security, an adverse effect determination, effective immediately, was issued on March 29, 1962, providing that the employment of Mexican nationals at hourly rates in 22 States could not be authorized at rates lower than the following:

ARIZONA	\$.95	MONTANA	\$1.00
ARKANSAS	.60	NEBRASKA	1.00
CALIFORNIA	1.00	NEVADA	1.00
COLORADO	.90	NEW MEXICO	.75
ILLINOIS	1.00	NORTH DAKOTA	1.00
INDIANA	1.00	OREGON	1.00
IOWA	1.00	SOUTH DAKOTA	1.00
KANSAS	1.00	TEXAS	.70
KENTUCKY	.80	UTAH	1.00
MICHIGAN	1.00	WISCONSIN	1.00
MINNESOTA	1.00	WYOMING	1.00

No authorization may be issued at piece rates which are not designed to produce hourly earnings at least equivalent to the prescribed hourly rates. The authorization must provide that piece workers would in no event be paid less than the prescribed hourly rate.
